EXPERIENCES

Betika.com — *Backend Engineer*

March 2023 - Present

- Progressed through USSD, Market Migrations, and Wallet teams, demonstrating adaptability across domains
- Built Go cloud functions for wallet platform handling M-Pesa, Airtel, TNM Mpamba, Telebirr, Orange Money, Africell, and ET Safaricom using MySQL and GCP BigQuery
- Provide technical support to teams across all Betika markets for wallet escalations and payment issues.
- Support wallet escalations across all Betika markets with technical documentation and comprehensive logging
- Improved TNM Mpamba callback reliability from 40% to stable processing through API optimization and enhanced deposit/withdrawal performance.

Web3Bridge — *Blockchain developer*

JANUARY 2025 - JUNE 2025

- Built an HR-Payment system with a team of developers, where employees receive salaries in stablecoins. (paytroix.xyz)
- Wrote unit test for the backend system for which Python was used to ensure all endpoints and methods are working as expected.
- Designed the frontend using NextJS and TypeScript, and also integrated the smart contract ABI into the frontend.
- Served as the product owner for this project. Atlassian was used for project management. Jira to create tickets to track the progress of each developer's work, and Confluence for the project documentation.

TOR BROWSER (Open-source project) — *Golang Engineer*

OCTOBER 2022 - MARCH 2023

- A backend engineer contributed to extending GetTor to distribute Tor Browser on censored networks over IM and social media.
- I tested the gettor functions using unit testing.
- I wrote a program to extend the gettor to share links over WhatsApp.
- Created a bot for WhatsApp using tulir/whatsmeow package as it supports multi-device.

Decagon, Lagos — *Software Engineer*

OCTOBER 2021 - NOVEMBER 2022

- Part of a team that developed a lunch application.
- Implemented the sign-up, log-out, and kitchen staff dashboard APIs.

TECHNOLOGIES

- HTML 5
- CSS 3
- Javascript
- Golang
- Solidity
- Hardhat
- Foundry
- Testing
- Docker
- Gorm
- Mysql
- Postgresql
- MongoDB
- Redis
- DDD, TDD architecture
- Version Control with Git and GitHub.
- Test-Driven Development.
- LINUX OS
- AWS
- GCP
- Digital Ocean
- OOP
- SOLID
- RESTful API
- Scrum
- gRPC
- Postman
- Swagger
- Open-source contributor

- A team member who developed, architected, and implemented backend APIs for an e-commerce system.
- Incorporated the update of users' details handlers and uploading of images to the AWS S3 bucket.
- A team member who developed a Doctor-Patient web app.
- Built projects with Golang, the GO-templating engine, React.js, and JavaScript.
- Handled Database Management Systems with SQL, like MySQL and Postgres.
- Experience writing unit and integration tests.
- Exposure to agile methodologies.

Zuri & Ingressive for Good(i4G), Lagos — Software Engineer

MARCH - AUGUST 2021

- Worked as a frontend developer and contributed to a fashion product(Maniera) using JavaScript.
- Integrated the payment-modal page of the fashion product.
- Handled scheduled tasks with cronjob.

HNGi7, Lagos — Software Engineer

MAY - AUGUST 2020

- A team member who developed a web-based social lending solution.
- Built usable react components.
- Experience writing unit and integration tests.
- Exposure to agile methodologies.

PROJECTS

Paytroix:

An HR-payment system for crypto payments. Recipients can receive salaries from organisations, and can also apply for a salary advance.

Technologies Used - Solidity, Foundry, Python, TypeScript, Next.js

Link: <https://paytroix.xyz/>

LUNCH-WALLET:

A meal application where food beneficiaries in an organization can access meals by scanning a QR code.

Technologies Used - Golang, Heroku, Gin, Gorm, Jira, Swagger, AWS.

Link: <https://github.com/decadevs/lunch-api>

OJA:

An e-commerce application for buyers and sellers where users can browse through different commodities such as wears, electronics, beauty, phones, and tablets, add to cart, checkout, and make purchases.

Technologies Used - React.js, JavaScript, Golang, Gin, Gorm, Docker, and Flutterwave API to process payment.

Link: <https://shoparena-frontend-phi.vercel.app/>

HealthPlus:

A doctor-patient appointment application.

Technologies Used - Golang, Go templating engine, MYSQL, Gorm, Go-Chi, GitHub Kanban.

Link: https://github.com/decadevs/health_plus

Fund My Laptop:

A platform where individuals can request help to raise funds for a brand-new or fairly used laptop.

Technologies Used: Python3, JavaScript, React, Bootstrap, SQLite.

Link:

<https://fundmylaptop.com/>

EDUCATION

University of Lagos — B.Sc

JANUARY 2013 -

NOVEMBER 2017

Second Class Upper -
Bachelor of Science degree in
Geography and Planning from
the University of Lagos,
Nigeria.

University of Zambia(DL) — MSc

In progress

Master of Science in Web
Design and Development
